；一、自定义函数部分

```
；-----
；1.睡眠函数
；-----
```

；函数旨在将Sleep函数的时间参数单位由ms修改为s

```
Sm(ti=0.1)
{
    ti := ti*1000
    Sleep, ti
}
```

```
；-----
；2.等待窗口函数
；-----
```

；wn为窗口完整名称，wt为窗口完整名称的子字符串

```
Ddck(wn,ti=0.1,wt=" ")
{
    WinWait, %wn%, %wt%,
    IfWinNotActive, %wn%, %wt%, WinActivate, %wn%, %wt%,
    WinWaitActive, %wn%, %wt%,
    Sm(ti)
}
```

```
；-----
；3.输入文字函数
；-----
```

；word为需要输入的文字，wait为ctrl+v后的睡眠时间

```
Srwz(word,ti=0.2)
{
    Clipboard = %word%
    Sm()
    Send, ^v
    Sm(ti)
}
```

```
；-----
；4.发送按键函数
；-----
```

；函数旨在为所有Send命令添加一行Sleep命令，避免手工多次输入Sleep的麻烦
；默认休息时间为0.1秒，休息时间由该函数第2个参数确定

```
Fs(na,ti=0.1)
{
    Send,%na%
```

```
    Sm(ti)
}

;5.寻找颜色函数
